Age Range: 8 - 11 years

Grade Level: 3 - 6

## Customer Reviews

A review from Mrs. LI am very surprised at how much I enjoyed reading this book. I also learned from it even though I bought it to give to a teacher friend who was planning a unit on oceans and wanted to supplement her curriculum. So, I read it ahead of time so we could talk about its contents together. First of all, the pictures and illustrations are excellent. It does a good job of providing visual pictures to describe aspects of the ocean that are difficult to envision. There are even pictures of experiments and projects featuring children which serve to entice interest as well as educate. The experiments and examples are also organized in a way that children would be capable of reproducing them and explaining them. This was a great addition to an already high quality book. There are models which provide indepth scenes of oceans and ocean life. I loved the collages that were done to show the deep sea floor, the tidal zones and marine life. The photos are meaningful and hit the nail on the head for what is needed for teaching. I think this is an excellent resource for teachers and for home school parents. It is an excellent source for curriculum

supplementation as well as a stand alone resource. I would not hesitate to give this book as a high quality gift for a child is grade 3 or higher. I think a very gifted, artistic teacher or parent could easily be inspired by some of the illustrations to develop a process-oriented project for the students to paint, draw, illustrate, sculpt or design models to reinforce what the children are learning about ocean life, habitats, map skills. This books also helps children to understand the concept of a "landscape" and the different types of landscapes.
