Age Range: 4 - 8 years

Grade Level: 1 - 3

Customer Reviews

I bought this little book to send to young grand kids. I am a lighting designer and wanted to give them an introduction to what I do. I appreciate that the language was clear and simple, good for an introduction of the subject to young people, but when simple becomes so simplistic that it gives misinformation it is wrong.LIGHT for example does not "bounce". Kids have an image of bounce - balls do that. Light reflects, a word that young people can understand.I won't be sending this to my grand kids.

This is a good little introduction book. The pictures reinforce the concepts on each page and guide your little one through a series of statements about the properties of light. As a homeschool mom,

we are using this book in kindergarten to guide our exploration about light. We read a couple of pages each day and then add a small experiment to reinforce the concept. Some experiments are even suggested in the reading. Everything is very simply stated, sometimes too much so. I do want my little one to grasp some slightly more advanced vocabulary than is used, so we are using the word "reflection" instead of just "bounce," for example. Overall it is a good book to use as an introduction or simple exploration of content. I will most likely purchase more Rookie Read About Science books based on my experience with this one.

The book arrived in good condition and on time. My students enjoy reading non-fiction books about Science concepts we are learning.

Great book for teaching kids
