Charting The World: Geography And Maps From Cave Paintings To GPS With 21 Activities (For Kids Series)

Synopsis

As soon as early humans began to scratch images on cave walls, they began to create maps. And while these first drawings were used to find hunting grounds or avoid danger, they later developed into far more complex navigational tools. *Charting the World* tells the fascinating history of maps and mapmaking, navigators and explorers, and the ways that technology has enhanced our ability to understand the world around us. Richly illustrated with full-color maps and diagrams, it gives children an in-depth appreciation of geographical concepts and principles and shows them how to unlock the wealth of information maps contain. It also features 21 hands-on activities for readers to put their new skills to the test.

Children will:

- build a three-dimensional island model using a contour map, engrave a simple map on an aluminum etching plate,
- determine the elevation of hills in their neighborhood, draw a treasure map and have a friend search for the hidden stash, create a nautical chart of a small puddle, survey their backyard or local park, navigate a course using a compass, and much more.

Now more than ever, the study of geography is crucial to understanding our ever-changing planet, from political change and warfare to environmental conservation and population growth.

Customer Reviews

I love maps! And I found this book extremely satisfying, for people of all ages! What a fascinating way to look at the evolution of our world over time and how we represent it in cartographic images, highly recommended!

great for a wonderful experience on mapping and learning gps and geography...Beautifully done and wonderfully interactive. Love it and almost kept it for ourselves...Maybe next time...

Had almost nothing about cave paintings as advertised, which is why I bought it. Book itself is alright.
